# JOB DESCRIPTION: SENIOR FULL STACK SOFTWARE ENGINEER

**CloudScale Technologies Inc. • Enterprise Cloud Platform • San Francisco, CA (Hybrid)**

## POSITION OVERVIEW

We are hiring a high-performing **Senior Full Stack Software Engineer** to design, build, and deploy mission-critical cloud platforms and enterprise web services. In this role, you will work across the entire stack, architecting high-throughput microservices, engineering scalable backend APIs, optimizing relational and document databases, and crafting responsive user interfaces. You will collaborate in an Agile sprint environment with product managers, QA teams, and DevOps engineers to deliver secure, production-ready software solutions.

## KEY RESPONSIBILITIES

- Design, develop, and maintain resilient **REST APIs** and microservices in **Python** to support heavy customer traffic.
- Build modern, performant, and responsive front-end user interfaces utilizing **JavaScript** and component-driven architectures.
- Design, query, and optimize relational and distributed **Databases** using advanced **SQL** schema design and indexing.
- Apply robust Object-Oriented Programming (**OOP**) principles, design patterns, and clean code standards.
- Containerize microservices with **Docker** and maintain automated **CI/CD** deployment pipelines.
- Implement comprehensive **Unit Testing** and test-driven development (TDD) suites to guarantee code stability.
- Collaborate in cross-functional **Agile** and **Scrum** ceremonies including sprint planning, daily standups, and backlog refinement.
- Leverage **Git** version control for branching, peer pull request reviews, and continuous delivery.
- Perform root cause analysis and technical troubleshooting on production incidents to maintain strict uptime SLAs.

## CANDIDATE QUALIFICATIONS & REQUIRED SKILLS

| | |
|---|---|
| **Required Skills (Must-Have):** | **Python, JavaScript, REST APIs, SQL, Git, OOP, Databases** |
| **Preferred Skills (Nice-to-Have):** | **Docker, CI/CD, Unit Testing, Agile, Scrum, Problem Solving, Microservices** |
| **Experience Level:** | 3 to 7+ years of hands-on software development experience across backend and full-stack environments. |
| **Education:** | Bachelor's or Master's degree in Computer Science, Software Engineering, Information Technology, or equivalent practical industry experience. |

## SCREENING & EVALUATION FRAMEWORK

Applicants will be evaluated through our dual-branch NLP matching architecture: **Skill Verification (55%)** matching core languages, frameworks, and tools, combined with **Semantic Resume TF-IDF Similarity (45%)** analyzing real-world engineering project experience, production scale, and responsibilities.
